Weekly report of Kalimpong Animal Shelter (KAS)

After the monsoon rain, the weather in Kalimpong is starting to clear a bit. Kalimpong Animal Shelter as usual is steady with its Projects and doing everything they can to serve the animal in and outpatients.

This week, the usual Programmes were carried out including Daily Treatment of animals, a few rescue operations and Animal Birth Control Prg.

KAS now has many litters of puppies, which are surrendered and yet to find a loving Home. We accepted around sixteen puppies' and out of which, a few have found their forever Home. Our appeal for 'adoption' is posted online so that these ten litters who are already weaning can find a Home. The rest six of them are with their mother, after they start to wean, we will put them up for adoption and get the mother dog spayed.

The kennels are filled with admit and rescue dogs who are undergoing treatment at KAS. Two cases of dogs with skin burns were admitted to the kennel this week at the request of the owners.

The right care and treatment are given to them by the KAS team.

Clinical treatment of animals is going on. Apart from treatment, dogs are coming in for vaccinations and health checkups.

Some of the rescues and owned pet animals were spayed this week at KAS on Tuesday and Thursday.
